

# Problem Set 1

## Kotro's Stock Market Challenge

This problem set is designed to be used with the Stock Market Game we play in class (or outside, but that's up to you).

### Instructions:

- Wait for Mr. K to get you signed up on the How the Market Works Stock Market Contest.
- We will practice our investment skills once weekly in class. We call this time "investing".
  - You are not limited to class time. You may invest any time M—F, 9:30—4 p.m. EST.
- You will have weekly assignments. Each assignment will have a short, online quiz. You must pass this quiz with a perfect score in order to earn credit for the assignment.
- Other than that, you're good to go. The grading scale is listed below.
- The password to join the contest is (case sensitive): Hawksfly

### RUBRIC

A= 36-40

B= 32-35

C= 28-31

D= 24-27

F= <23

### Grading Scale:

Each assignment (reading and quiz) you are given in class is worth 2 points. There are 10 assignments in quarter 1 and 10 assignments in quarter 2 for a combined score of 40 points. The grades will be entered in Infinite campus as Problem Set 1 part 1 (quarter 1) and Problem Set 2 part 2 (quarter 2).

Other grading considerations are below, but I'll primarily use the point system.

I want to see:

- A profit on your investment portfolio would be nice, but is not necessary.
- You must be on time every day this semester, ESPECIALLY on investing days!
- You taking the game seriously and making trades.
- If you are not logging in to the game and making trades or viewing your portfolio, I will take off points.
